

GEORGI MITREV

georgi@mitrev.net · mitrev.net · github.com/gmitrev

I am a passionate and pragmatic software engineer with a lot of experience building and maintaining large web applications. Focused on scalable Rails services, distributed job processing and infrastructure automation.

SKILLS

<i>Backend</i>	Ruby, Ruby on Rails, NodeJS
<i>Frontend</i>	React, Svelte, Tailwind, StimulusJS
<i>Tools</i>	PostgreSQL, Sidekiq, Redis, RabbitMQ, Unix tools, Git
<i>Infrastructure</i>	Docker, Kubernetes, AWS, Cloudflare Workers
<i>Interested in</i>	Rust, Elixir

WORK EXPERIENCE

Simplero - *Software Engineer*

2024-2026

- Developed a highly advanced page builder capable of creating a wide variety of landing pages and marketing websites.
- Worked on a survey platform capable of building complex questionnaires.
- Shared infrastructure duties with other engineers and focused on performance improvements of the application and database.

Checkout-X - *Software Engineer*

2020-2024

- Implemented a state-of-the-art checkout system for online shops using Shopify and WooCommerce built on React and GraphQL.
- Worked on a Shopify app that provides post-purchase upsells to shops. Built with React and Rails and backed by a GraphQL API.
- Created a product recommendation ML engine built on AWS Personalize that can suggest appropriate product upsells based on customers orders.
- Built the logging infrastructure for all company applications backed by ELK and using logstash to ingest data from multiple sources.

Receipt Bank (now Dext) - *Software Engineer*

2015-2020

- Developed a background job library that can use a multitude of adapters for performing jobs and also provides a lot of additional features on top of the libraries.
- Responsible for the monitoring and scaling of the Sidekiq background job servers as well as guiding other developers on how to create maintainable and scalable jobs.
- Worked on the migration of the main monolithic application from EC2 machines to a Kubernetes cluster.
- Built an internal self-service platform on Kubernetes letting each developer spin up an isolated full-stack environment on demand, eliminating staging contention.

IST Technologies - *Software Engineer*

2011-2015

- Worked on the back- and front-end of a big monolithic Rails application for issuing insurance policies.
- Refactored said monolithic application into a number of smaller interconnected microservices.
- Built the infrastructure for testing and deploying of said microservices.
- Integrated more than 15 external web services, both SOAP- and REST-based.
- Monitored and improved the performance of the entire stack.

Freelance Web Developer

2010-2011

- Worked on the back-end of an online ticket selling system.
- Co-developed a CRM for a travel agency.

NOTABLE SIDE PROJECTS

Nadir

nadir.dev

Technical and trivia quizzes graded by AI. Works great as interview prep for technical interviews because it provides great feedback for wrong/incomplete answers.

Stonksfolio

stonksfolio.com

A stock/ETF portfolio tracker that provides insights into the performance of portfolios. Supports most popular brokers with an optional CSV import for others. Includes tools for benchmarking, rebalancing and measuring FX impact.

Offlife

offlife.net

A collection of helpful applications for the daily life: day organizer, journal, cookbook, project manager and workout tracker.

boring-backup Sentinel

boringbackup.com

The boring-backup gem is the easiest way to backup a PostgreSQL database to AWS S3 for Rails applications. It notifies the Sentinel after every run, and if a notification doesn't arrive on time, the Sentinel alerts you.

MORE ABOUT ME

When not working, I like to read books, lurk the Internet and play videogames. I also enjoy mountain biking and skiing.
