

GEORGI MITREV

I am a passionate and pragmatic software engineer with a lot of experience building and maintaining large web applications. Focused on scalable Rails services, distributed job processing and infrastructure automation.

SKILLS

Backend: Ruby, Ruby on Rails, NodeJS

Frontend: React, Svelte, TailwindCSS, StimulusJS

Tools: PostgreSQL, Sidekiq, Redis, RabbitMQ, Unix tools, Git

Infrastructure: Docker, Kubernetes, AWS

Interested in: Rust, Elixir

WORK EXPERIENCE

Simplero - Software Engineer

2024 - 2026

- Developed a highly advanced page builder capable of creating a wide variety of landing pages and marketing websites.
- Worked on a survey platform capable of building complex questionnaires.

Checkout-X - Software Engineer

2020 - 2024

- Implemented a state-of-the-art checkout system for online shops using Shopify and WooCommerce built on React and GraphQL.
- Worked on a Shopify app that provides post-purchase upsells to shops. Built with React and Rails and backed by a GraphQL API.
- Created a product recommendation ML engine built on AWS Personalize that can suggest appropriate product upsells based on customers orders.
- Built the logging infrastructure for all company applications backed by ELK and using logstash to ingest data from multiple sources.

Receipt Bank (now Dext) - Software Engineer

2015 - 2020

- Developed a background job library that can use a multitude of adapters for performing jobs and also provides a lot of additional features on top of the libraries.
- Responsible for the monitoring and scaling of the Sidekiq background job servers as well as guiding other developers on how to create maintainable and scalable jobs.
- Lead the migration of the main monolithic application from EC2 machines to a Kubernetes cluster.
- Built an internal self-service platform on Kubernetes letting each developer spin up an isolated full-stack environment on demand, eliminating staging contention.

IST Technologies - Software Engineer

2011 - 2015

- Worked on the back- and front-end of a big monolithic Rails application for managing insurance policies.
- Refactored said monolithic application into a number of smaller interconnected microservices.
- Built the infrastructure for testing and deploying of said microservices.
- Integrated more than 15 external web services, both SOAP- and REST-based.
- Monitored and improved the performance of the entire stack.

Freelance Web Developer

2010 - 2011

- Worked on the back-end of an online ticket selling system.
- Co-developed a CRM for a travel agency.

MORE ABOUT ME

I love working on side projects that enrich my life and help me make it easier. I tend to measure everything so I've created applications for tracking my weight, weight-lifting stats, budget, investments, recipes and even a linear-lite project management system for my life.

When not working, I like to read books, lurk the Internet and play videogames. I also enjoy mountain biking and skiing when the weather allows it.
